Aim:

Write a Java program to illustrate the **abstract class** concept.

Create an abstract class CalcArea and declare the methods **triangleArea(double b, double h)**, **rectangleArea(double l, double b)**, **squareArea(double s)**, **circleArea(double r)**.

Create a class FindArea which extends the abstract class CalcArea used to find areas of triangle, rectangle, square, circle.

Write a class Area with the **main()** method which will receive **two** arguments and convert them to **double** type.

If the input is given as command line arguments to the **main()** as **"1.2","2.7"** then the program should print the output as:

```
Area of triangle : 1.62
Area of rectangle : 3.24
Area of square : 1.44
Area of circle : 22.890600000000006
```

Note: Please don't change the package name.

Source Code:

q11286/Area.java

```java
package q11286;
public class Area {
    public static void main(String args[]) {
        FindArea area = new FindArea();
        area.triangleArea(Double.parseDouble(args[0]), Double.parseDouble(args[1]));
        area.rectangleArea(Double.parseDouble(args[0]), Double.parseDouble(args[1]));
        area.squareArea(Double.parseDouble(args[0]));
        area.circleArea(Double.parseDouble(args[1]));
    }
}
abstract class CalcArea
{
    abstract void triangleArea(double b,double h);
    abstract void rectangleArea(double l,double b);
    abstract void squareArea(double s);
    abstract void circleArea(double r);
}
class FindArea extends CalcArea
{
    void triangleArea(double b,double h)
    {
        System.out.println("Area of triangle : "+(0.5*b*h));
    }
    void rectangleArea(double l,double b)
```

```
    {
        System.out.println("Area of rectangle : "+(l*b));
    }
    void squareArea(double s)
    {
        System.out.println("Area of square : "+(s*s));
    }
    void circleArea(double r)
    {
        System.out.println("Area of circle : "+(3.14*r*r));
    }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Area of triangle : 7.5294000000000001
Area of rectangle : 15.058800000000002
Area of square : 12.6736
Area of circle : 56.18370600000001

Test Case - 2
User Output
Area of triangle : 83.14375000000001
Area of rectangle : 166.28750000000002
Area of square : 157.50250000000003
Area of circle : 551.26625
